### **Pentosin 5W-40 High Performance II Synthetic Motor Oil is OEM Specified for Long-Life Service Intervals**

Carteret, NJ, November 3, 2008: **Pentosin 5W 40 High Performance II** motor oil is especially designed and manufactured to meet the demanding OEM specifications of leading European high performance car manufacturers. Offering greater viscosity performance than conventional motor oils, the **Pentosin 5W 40 HP II** has been tested and approved to meet the most challenging long-life and extended service interval specifications including Audi and Volkswagen 502.00, 505.00 and 505.01, BMW LL-04, Mercedes Benz 229.51 as well as Porsche.

As a high performance synthetic motor oil, the Pentosin 5W 40 HP II maintains excellent High Temperature / High Sheer (HTHS) viscosity in the most challenging driving conditions. Even at extremely low cold temperatures of - 44° F (- 42 ° C), the Pentosin HP II motor oil continues to flow and crank lubricating parts while providing maximum engine wear protection. Pentosin 5W 40 HP II meets or exceeds the high viscosity ratings for both API SM/CF quality performance approvals and the European ACEA A3/B3/B4/C3 specifications for gasoline and diesel engines. With its low sulfated ash, phosphorous and sulfur properties (SAPS), the Pentosin 5W 40 HP II motor oil is two-way catalyst compatible. And as a long-life motor oil with low ash properties, it is approved by Mercedes for use with fleece filters and exhaust particle filters in their diesel engines.

Formulated as a long-life motor oil providing the maximum degree of engine wear protection between extended oil change intervals, the Pentosin 5W 40 High Performance II helps vehicle operators of leading Europe car models achieve unsurpassed engine performance, efficiency, and fuel economy. The product is available in 1, 5 and bulk liter sizes.

**About CRP & Pentosin:**

As Pentosin's NAFTA partner since 1983, CRP ships from distribution centers in New Jersey, California, Canada and Mexico. Pentosin fluids are engineered to meet the demanding OE standards set by many of Europe's leading automobile manufacturers. Founded in 1927, Pentosin is a leader in the field of technical fluids; and maintains its solid position through a combination of commitment to research & development and state-of-the-art manufacturing processes. Quality control and certification are integral to the Pentosin process, and Pentosin products are original fill on a number of European, Asian, and domestic car brands.
